EXPERIENCE DESIGN ENGINEER ASSIGNMENT

Design rationale

LIT School | Student proof-of-work portfolio

Prepared by Meghna Sen | 26 October 2026

DESIGN INTENT

Make the student profile a recruiter-first portfolio: within a quick scan, a recruiter should understand who the student is, what they can do, what they personally delivered, what evidence supports the claim, and why a conversation is worthwhile. The design favours proof over promises and makes the path from discovery to evidence inspection direct.

RECRUITER QUESTIONS COVERED IN THE DEMO

WHO? Student identity	WHAT IS THEIR STRENGTH? Skills linked to work	WHAT HAVE THEY DONE? Contribution and impact	WHAT IS THE PROOF? Evidence and status	WHY SPEAK? Role fit and contact

01 | INFORMATION HIERARCHY

A concise student introduction and opportunity status lead into proof-of-work. Project cards foreground role, brief, contribution, outcome, skills and evidence status. Search, category filters and evidence sorting help recruiters find relevant work quickly.

02 | STUDENT CONTROL

Profile editing, skill management, project creation, draft saving and publishing let the student shape the story. Dedicated views for work, skill sets, learning journey and role fit support different recruiter questions without burying the work.

03 | VISUAL SYSTEM

A near-black foundation keeps focus on content; electric purple (#4B00FF) anchors primary actions; deep violet adds depth; acid lime (#D9FF3F) is reserved for selective emphasis; orange (#FF5B2E) stays an accent. White and soft-lavender surfaces separate content. Supplied LIT logo/banner assets establish brand context.

04 | INTERACTION & ACCESSIBILITY

shadcn/ui is the component reference, not a runtime dependency: buttons have clear primary, secondary and outline hierarchy; forms, cards, tabs and dialogs share consistent spacing and borders. Labels, focus-visible outlines, keyboard access, semantic dialog states, readable contrast and reduced-motion support are prioritised. Motion is limited to subtle transitions and hover feedback.

FUNCTIONAL SCOPE & DEMO BOUNDARIES

The prototype demonstrates the student and recruiter journeys in a standalone browser experience: view and inspect projects; search, filter and sort; edit profile details; manage skills; save drafts and publish project entries; explore role fit; and preview a recruiter enquiry. It is a demo, not a connected LIT product: data and edits are illustrative and browser-local, enquiry submission is preview-only, and there is no LIT OS/backend integration, authentication, secure upload service or independently verified student evidence. Replace sample content with approved, verified data and implement server-side persistence and access controls before production use.
